Effect of mesterolone on serum FSH, LH and plasma testosterone in normal men. Wang C, Burger HG, de Kretser DM, Dulmanis A, Hudson B, Keogh EJ, Suthers MB.

Mesterolone demonstrated to have minimal effect on sperm counts and levels of FSH or LH. Experiments of mesterolone serving as a potential treatment of depression are still undergoing. DrugBank. Contents. 1 Structures Expand this section. 2 Names and Identifiers Expand this section.

Download Citation | Effect of Mesterolone* on Plasma L.H., F.S.H. and Testosterone | Der Einfluß von Mesterolon auf LH, FSH und Testosteron im Blutplasma Es ist gefordert worden, daß peroral. [hop over to these guys](#)

Mesterolone had no depressing effect on low or normal serum FSH and LH levels but had depressing effect on 25% if the levels were elevated. There was no significant adverse effect on testosterone levels or on liver function.

The response to Mesterolone, in doses of 25 mg/day, was examined in 42 pathospermic patients. Treatment lasted for 100 days. The pronounced response to the Mesterolone treatment was observed in hypozoo- and oligozoospermia with low initial fructose content in the ejaculate. Fructose content attained its normal range after the treatment.

Der Einfluß von Mesterolon

auf LH, FSH und Testosteron im Blutplasma Es ist gefordert worden, daß peroral zugeführtes Mesterolon — im Gegensatz zu 17α -methyl-Testosteron — weder die endogenen Gonadot. Mesterolone therapy produced no change in serum FSH and LH levels in 94 of 110 patients (85.5%) with normal serum levels whereas 14.5% had a reduction in levels by 1-10% at the time when the therapy was stopped. Similar lack of changes were noted when the serum FSH and LH levels were low.

The authors conclude that Mesterolone does not influence plasma FSH, LH and testosterone levels, it has only peripheral effects. PMID: 689818 [PubMed - indexed for MEDLINE] MeSH Terms. Adult; Dihydrotestosterone/analogs & derivatives* Follicle Stimulating Hormone/blood; Fructose/analysis; Humans; Luteinizing Hormone/blood; Male; Mesterolone. [the full report](#)
