injections. When given to mothers in preterm labour, dexamethosone, a steroid used to treat asthma, helps speed up the development of the baby's lungs. At a cost of about US\$1, two shots can stop premature babies from going into respiratory distress when they are born. This can prevent 400 000 deaths annually.

An epidural steroid injection,

or block, is a non-surgical pain management treatment that delivers a local anesthetic directly into the spine at the source of the pain. The epidural steroid injection reduces inflammation in the spine which helps alleviate pain, and can be used to treat a number of conditions including herniated disc, spinal.
